

X300™ LED WEAPONLIGHT

The SureFire X300 offers tactical professionals and concerned civilians a WeaponLight that just about does it all. Its extremely bright LED—over five times brighter than a typical two-D-cell flashlight—has enough power to reach into the night or temporarily blind an aggressor. Yet its beam offers enough peripheral vision that you're not suddenly surprised by what it may uncover—an unfortunate cause of too many accidental shootings.

Packed in a waterproof, hard-anodized aerospace-grade aluminum body, the X300's virtually indestructible LED has no filament to burn out or break from the effects of recoil. Ambidextrous switching makes it easy to operate with either hand, and remote switching is available for precise control without altering your grip on the weapon. It slides onto most handguns with Universal Standard accessory rails and fits many earlier guns without rails via a SureFire rail adapter. The X300 can also be mounted on long guns sporting a Mil-Spec Picatinny rail.

For military, law enforcement, or civilian applications, the SureFire X300 provides a tactical advantage in close-quarter engagements, longer-range engagements, and home protection.
